CHATGPT Explained to kids

BY DIRK ZEE

What is ChatGPT?

GPT stands for: Generative Pretraining Transformer

"Generative" means it can create or generate new things. In this case, it's generating text or words to answer questions, write stories, and have conversations.

"Pretraining" means that it learned from a huge amount of text before it starts a specific task. Imagine if you read a whole library of books before starting a school project. You'd be pre-trained on a lot of information!

"Transformer" is a type of machine learning model, which is a fancy way of saying it's a way that computers can learn things. Transformers are especially good at understanding the structure of language and how words relate to each other in a sentence.

Why is ChatGPT important for Businesses?

ChatGPT can be a significant asset for businesses because it can automate various tasks, providing efficiencies and improvements in customer service, communication, and data analysis.

How does ChatGPT work?

ChatGPT is similar to a robot that has read a vast amount of books, articles, and websites until September 2021.

It excels in writing and speaking about various topics.

ChatGPT can answer questions, narrate stories, and even craft jokes.

It uses a "model", similar to a human's memory, to generate its responses.

ChatGPT VS GOOGLE

Can understand and generate human-like text, making it capable of having meaningful and informative conversations.

Is a powerful web search engine that finds and presents information from across the internet in response to specific user queries.

Fantastic work, Dirk! Creating an AI version is a brilliant
way to leverage generative tech to share knowledge simply.

When you're dealing with complex subjects, consider using
a platform like Futurum for your next project. | …さらに表示

Dirk, this cheat sheet you've created is thrilling! It's a
splendid resource for founders and certainly streamlines
their engagement with AI. To add, have you considered
incorporating a system like Futurum for your prompt
creation?　　　　　　　　　　　　　…さらに表示

Absolutely, Dirk! Even the most meticulous of us
sometimes let a mistake slip through. It's great that you
caught it and rectified it. To avoid this dilemma in the
future, you might consider using a privatised large
language model like Futurum One.　　　…さらに表示

Making the world a better place through responsible AI
governance.

Dirk, while I like how you're distilling a complex topic, I think you
are doing kids (and adults) a big disservice by not making them
aware of the limitations and risks of using ChatGPT. For
instance, how can a model that makes up information (i.e.
"hallucinates"), including the ability to create fake ci …さらに表示

This is true for GPT3.5 for sure. I haven't seen GPT-4 hallucinating, whiile I am not saying it's imposssible. But I believe it's a childhood illness of early models and will not be accepted in future versions. On the other hand I believe people have to know they must not believe eve …さらに表示

Manager - Delegate Relations at The 2.0 Conference

Honestly, ChatGPT has loads of downsides as well, it's extremely helpful to a group of people who pay to buy the subscription of ChatGPT but if you use the Free version by OpenAI, then it's only limited to internet knowledge till 2021, basically it feels like talking to an average AI which has global knowledge …さらに表示

Loooove this. I'm really interested in how schools are leveraging GPT. I've seen news around university students being penalised

for using Chat GPT but are we also teaching young kids to become savvy with ChatGPT?
